

UniUpdate 0003

Product & Technical Support Information

Dear EXOR International,

we would like to inform you that we have just released a JMobile Suite Service Pack.

See below for some additional details.

JMobile Updates

JMobile Suite Service Pack 02 has been released.

The Service Pack contains mainly bug fixes. The revision history available from the Help menu contains a detailed list of changes and fixes.

The on-line help has been also improved by adding some additional chapters.

The update is available for free to all registered users from the automatic software update tool on the Studio Help menu.

The Service Pack contains also an anticipation of some new features that will be core part of the next release.

In particular I would like to recall your attention of the support we have introduced to the full keypad customization.

The data entry keypads can now be freely customized by the user and they are saved as part of the project. This opens a huge set of interesting opportunities to make ergonomic and powerful interfaces.

Keypad customization is not yet described in the help document; it will be updated in the next release.

One more added feature is the possibility to have now the visualization of a live value of a Tag in the alarm description; it will be enough to insert the tag name enclosed in square bracket, as for instance [Tag1], in the alarm description to have the system replacing this with the live tag value in case the alarm is triggered and showed in the alarm widget.
